ENERGY PERFORMANCE

TAKE CONTROL OF YOUR ENERGY CONSUMPTION!

Whether you want to comply with regulations or simply enter into a process of reducing your energy consumption, our monitoring, analysis and alert solutions will help you achieve your objectives.

We support you in this process with a:

SYSTEM OPTIMIZING AND COLLECTING YOUR ENERGY DATA

Thanks to the sensors that we deploy on your site, you will be able to collect detailed information on the way in which you consume. Whether on your electrical outlets, your meters or sub-meters or thanks to sensors installed at strategic points, you will know all about what costs you money!

The typologies of the buildings concerned are for example:

ADMINISTRATION

OFFICES

EDUCATION

BUSINESS

HOSPITAL

WAREHOUSE

COMPLY WITH THE REGULATIONS & OPTIMIZE YOUR MANAGEMENT

The ELAN law makes energy consumption reduction actions mandatory in many buildings.

With the tertiary decree, it sets an ambitious target for reducing energy consumption: -40% in 2030, -50% in 2040 and -60% in 2050.

The BACS decree refers to the obligation to implement "building automation and control systems" to achieve energy efficiency objectives. The deadline for getting equipped is January 1, 2025.

ACCELERATE YOUR ENERGY & ENVIRONMENTAL PERFORMANCE

Our sensors make it possible to trace the values of gas and electricity meters. You thus have a totally controlled system that allows you to know your consumption in real time, to monitor overconsumption and to identify energy-consuming equipment. Our electrical measurement units allow you to go even further and carry out effective sub-metering and thus participate in the sustainable reduction of your energy bills.

ENERGY MANAGEMENT CHALLENGES

- Promoting environmental transition
- Encourage the adoption of digital tracking platforms
- Reduce energy bills
- Gain operational efficiency

Our fully customizable dashboards will allow you to integrate other information from external sources for an even more detailed analysis.

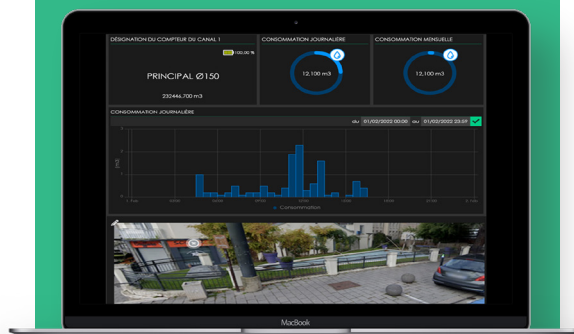

STATISTICS & REPORTING

Manage your energy consumption with a simple and intuitive interface allowing you to consult all your information in real time from any IT tool (computer, tablet, smartphone).

You can set up alerts (mail, notification, SMS) and centralize information to analyse the evolution of your consumption in your different locations.

→ Tracking levels:

5 minutes • Hour • Day
Week • Month • trimester • Year

Our sensors adapt according to the data that you wish measure!
